

● Available now · Seoul, KR · works AEST hours (1–2h overlap)

Idea · design · build · deploy · operations.

Frontend · Backend · Mobile · Design Systems · Operations.

Full-stack developer who runs a project end-to-end — frontend (**React / Vue**), mobile (**RN / SwiftUI**), backend (**Spring / Node / PHP**), database design, design systems, SEO, and hosting. Led a Washington D.C. dental clinic's website **solo for 2 years 5 months, 100% remote from Seoul**, and shipped a casual game on iOS and Android single-handed. Open to **AU remote roles** — Seoul sits within **1–2 hours of Sydney (AEST)**, no visa sponsorship required.

— 01 ABOUT

Hi, I'm Jaehee Kim. I work full-stack — React/TypeScript on the front, with React Native, Java/Spring, Node.js, and PHP across the rest of the stack. A generalist who runs projects from spec to ops.

Sketching IA and wireframes in the requirements meeting, writing the components, shipping to a server, then reworking the UI from user feedback. Owning that whole cycle end-to-end is what I'm best at.

EXPERIENCE **Nearly 4 years professional** · coding daily since 2021 · 2y 5m remote with a Washington D.C. client

ROLE Web · Web App · Mobile · Ops **ALL ROUNDER**

SOLO
SHIPPED iOS & Android game (live) · D.C. dental site (2y 5m)

ENGLISH Conversational · TOEIC Speaking IM1 · 2y 5m of real async/sync remote work in English

TIMEZONE Seoul (UTC+9) · works full overlap with AEST (1–2h gap)

AVAILABILITY Available now · Remote contractor · **no visa sponsorship needed**

01

End-to-end execution

Requirements → IA / wireframes → UI build → deploy & ops, all solo. Two years and five months leading PrecisionMicroEndodontics single-handed is the proof.

02

Solo or with a team

Shipped Apple Pop to both the App Store and Google Play on my own, and embedded the Notion · Figma · GitHub flow with designers, PMs, and backend folks on team projects.

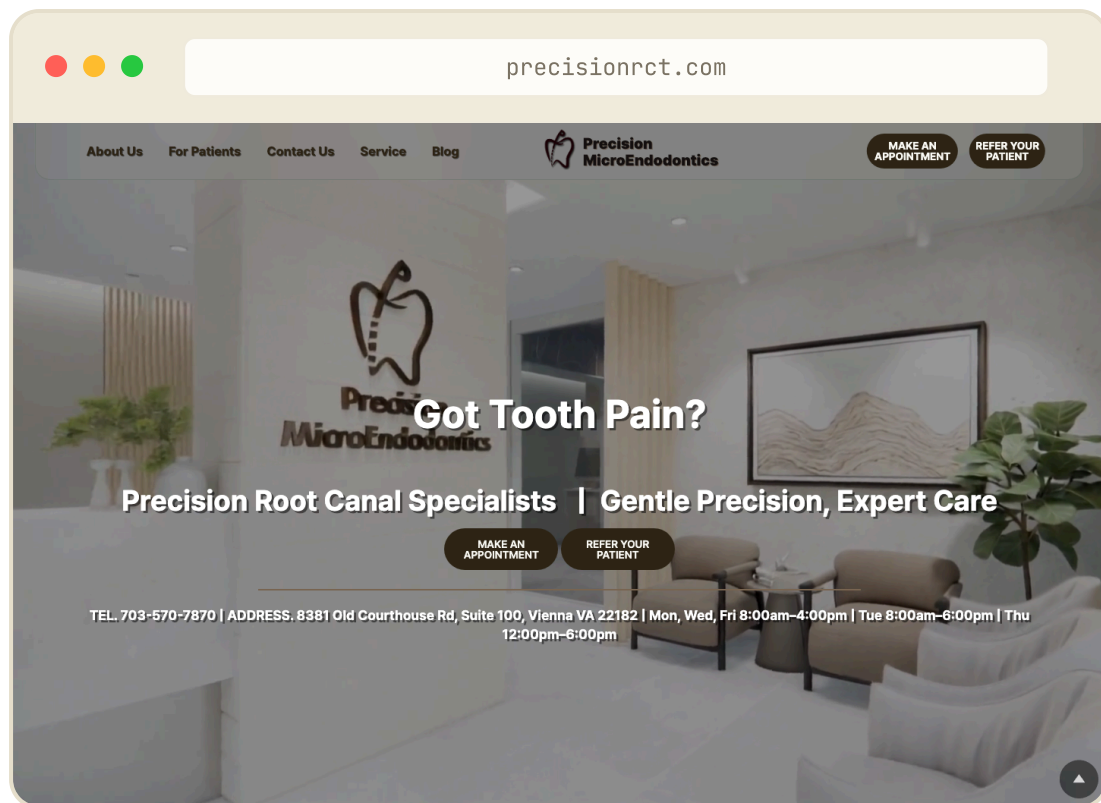

03

I build the tools I need

When existing tools fall short, I learn the stack and ship one (AI Usage — Swift / SwiftUI menubar app, currently on TestFlight). Tool gaps shouldn't slow the work down.

Washington D.C. dental clinic · Lead Developer · 100% remote · 01/2024 – 05/2026

PrecisionMicroEndodontics

Solo, remote

Led a Washington D.C. endodontic clinic's site end-to-end, 100% remote from Seoul. Strategy, design, dev, SEO, hosting — 2 years 5 months without downtime, then handed off cleanly to automation (01/2024 – 05/2026).

- Built the static pages as a **PHP + JSON-file content rendering system**. Designed the publishing, categorisation, and URL structure from scratch
- jQuery + Bootstrap 5 + Animate On Scroll for **responsive design and cross-browser stability**. Readability and accessibility first, as a patient-facing medical site
- Improved **Google search ranking** through keyword-driven content, metadata, sitemap, and OG tags (Vienna, VA local SEO focus)

- Ran the SiteGround managed hosting, domain, SSL, backups, and incident response personally. **2 years 5 months uptime**, then automated handoff

Solo full-stack · spec, design, client, backend, CI/CD, and ops — every piece

Apple Pop Solo build

A casual blossom puzzle: drag apples that sum to 10. **A full stack owned by one person** — a learning case where I handled component design, API security, CI/CD, and i18n on my own.

- **Component + design-system tokens** designed from scratch (colour, typography, radius, motion, spacing). TypeScript-based reusable patterns that transfer straight to web components

- Supabase (Postgres) + Edge Functions for **REST/RPC, auth, and leaderboard transactions**. iOS/Android IAP receipts verified server-side to **block tampering**
- **i18next with 22 locales** in production. Standard global i18n setup with font fallbacks and externalised strings
- EAS CI/CD · auto signing · review automation, **Sentry monitoring**, AdMob, privacy policy. Set up the ops, DevOps, and compliance side myself

03 / 05

Personal project · solo · macOS / iOS

AI Usage TestFlight

If the tool I need doesn't exist, I build it. A **SwiftUI** companion app that surfaces Claude Code · Codex CLI token usage in a macOS menubar and an iOS lock-screen widget. Local-first, currently on TestFlight.

- Built a usage dashboard Anthropic doesn't ship — **SwiftUI menubar + popover** that tracks **both Claude Code and Codex CLI** in one place
- **GRDB (SQLite)** stores 90 days of usage locally; FSEvents watches session files in real time
- iCloud Drive snapshot sync mirrors data from **iPhone → Mac menubar + home widget**, all on the same view
- iOS home/lock widgets (systemSmall · systemMedium · accessoryRectangular) all supported. **Zero servers · zero external data** — fully local

Why build this myself?

If the tool I need doesn't exist, I don't wait — I build it. Picking up a new stack (Swift / SwiftUI / WidgetKit / GRDB) and shipping a working product in a short window is something **I do well**.

Digital SAT web app Design + Dev

B2B SaaS for Digital SAT test sittings. Owned the cycle from client requirements → IA → Figma prototype → UX/UI design, then led the React frontend build.

- Owned the **IA, wireframes, Figma prototype, and UX/UI design** for Students, Tests, Lessons, and Points modules — single-handed
- Sat in client meetings, translated requirements straight into screens — the **1:1 client cycle ran through one person**
- Per-academy student results dashboard (round averages, per-student ranking, comparison charts against peer academies)
- Round-by-round setup, search, filters, download/print — workflows tailored to how the academies actually run
- Connected my own Figma → React components to a Java + MariaDB backend, auto-saving and restoring sitting state

Remote career mentoring

Career mentoring site for Korea's Ministry of Education / KOEF.

Two persona portals — Mentors (career instructors, training providers) and Schools (teachers, institutions) — run side by side.

- **Mentor portal + School portal** running on a shared backend / DB. Designed the auth and flow forks
- Spring MVC + JSP screens, jQuery / AJAX for async, plus the member, class, board, and stats modules
- Full public-sector cycle — **requirements alignment** → **dev** → **deploy** → **incident response**
- Some screens built with React (JSXTransformer) for dynamic component composition

04 CAREER

Timeline so far

05/2026 → present

Independent Developer · solo full-stack

Operating Apple Pop (App Store + Google Play) · building AI Usage (TestFlight) · Arrow Out reskin prototype. Open to AU / global remote contracts.

01/2024 – 05/2026

PrecisionMicroEndodontics · Lead Developer

Led the Washington D.C. dental clinic's site solo, 100% remote from Seoul. Spec → design → dev → SEO → hosting. 2 years 5 months.

2023 – 2024

Educational Space Co. · Dev Team, Assistant Manager

Digital SAT web app, spec + build (React + Java/MariaDB).

2023 (H1)

Green Academy · Frontend (React/Vue) bootcamp

Responsive web apps · SPAs · PWAs. Embedded GitHub-based collaboration.

2021 – 2022

Entels · Solutions team

Built the Seoul Office of Education's remote mentoring site (Java/Spring/JSP).

2021

AIS · Intern

Built a daily auto-email pipeline in UiPath RPA.

What I've learnt · what's certified

EDUCATION

Hi-Media IT Academy

AI Digital Transformation system development · 07/2021 – 10/2021

Learnt the build → test → deploy cycle across Java / JSP / Python / SQL / UiPath.

Green Academy

Project-based frontend (React, Vue) · 01/2023 – 06/2023

Responsive web apps · SPAs · PWAs (CGV / Hankook Tire site clones). Embedded GitHub-based collaboration.

Ogeum High School

Class of 2018

CERTIFICATES

Computerised Accounting · Level 1

National certification · Korean Tax Accountants Association · 03/2021

Driver's Licence

Korean National Police Agency · 07/2018

Document Practical Skills · Level 4

National certification · KIMA · 05/2010

LANGUAGES

English · conversational

TOEIC Speaking IM1 · 06/2023

Worked directly with the Washington D.C. dental clinic in English — Slack, email, and video calls, all in English, for 2 years 5 months.

LIVE PROJECT

precisionrct.com →

Open to frontend · backend · web · software engineer roles. Full-time, contract, or freelance — all welcome.
Remote roles in **AEST timezones (AU / NZ)** are an especially good fit — Seoul is within 1–2 hours of Sydney,

no visa sponsorship required, and I have 2+ years of remote experience with English-speaking clients. Happy to start with a coffee chat or jump straight to an interview.
